

An underwater photograph of a swimmer in a pool. The swimmer is wearing a blue swimsuit and goggles, and is reaching up towards the surface with one hand. The water is clear and blue, with light rays visible. The swimmer is in the center of the frame, and the background shows the pool's structure and some lights.

Get the most out of your pool

Unlock new opportunities, add value to your clients and strengthen
your position in the premium pool market with EVA Optic

EVA

EVA Optic

The world of swimming pools is changing. Owners no longer see their pool as a luxury for just a few warm days a year, but as a space that should add value throughout every season. A pool has become an investment in lifestyle, health, and well-being.

EVA Optic innovations

With EVA Optic innovations, even the smallest pool can be transformed into a fully-fledged swimming environment. Our counter-current swimming machines make it possible to train intensively, swim leisurely laps, or focus on rehabilitation. Combined with our premium led underwater lighting, they create a complete experience that unites sport, relaxation and well-being. All within the privacy of your own home.

Innovation and quality as our foundation

For more than fifteen years, EVA Optic has been Europe's leading specialist in technical experience products for swimming pools. Our products are available in over thirty countries and have been installed in more than 16,000 residential pools and 900 commercial facilities worldwide, including renowned holiday resorts such as Center Parcs. Even in extreme environments, such as diving tanks, sea aquariums, and nuclear reactors, our products have proven their reliability year after year.

This reputation is the result of the way we work. Every EVA product is developed and manufactured in the Netherlands. We have our own engineering department and state-of-the-art production facilities, including an SMT pick & place line and X-ray quality control. This level of in-house expertise is unique in the industry and offers our partners significant advantages:

Knowledge and expertise in-house

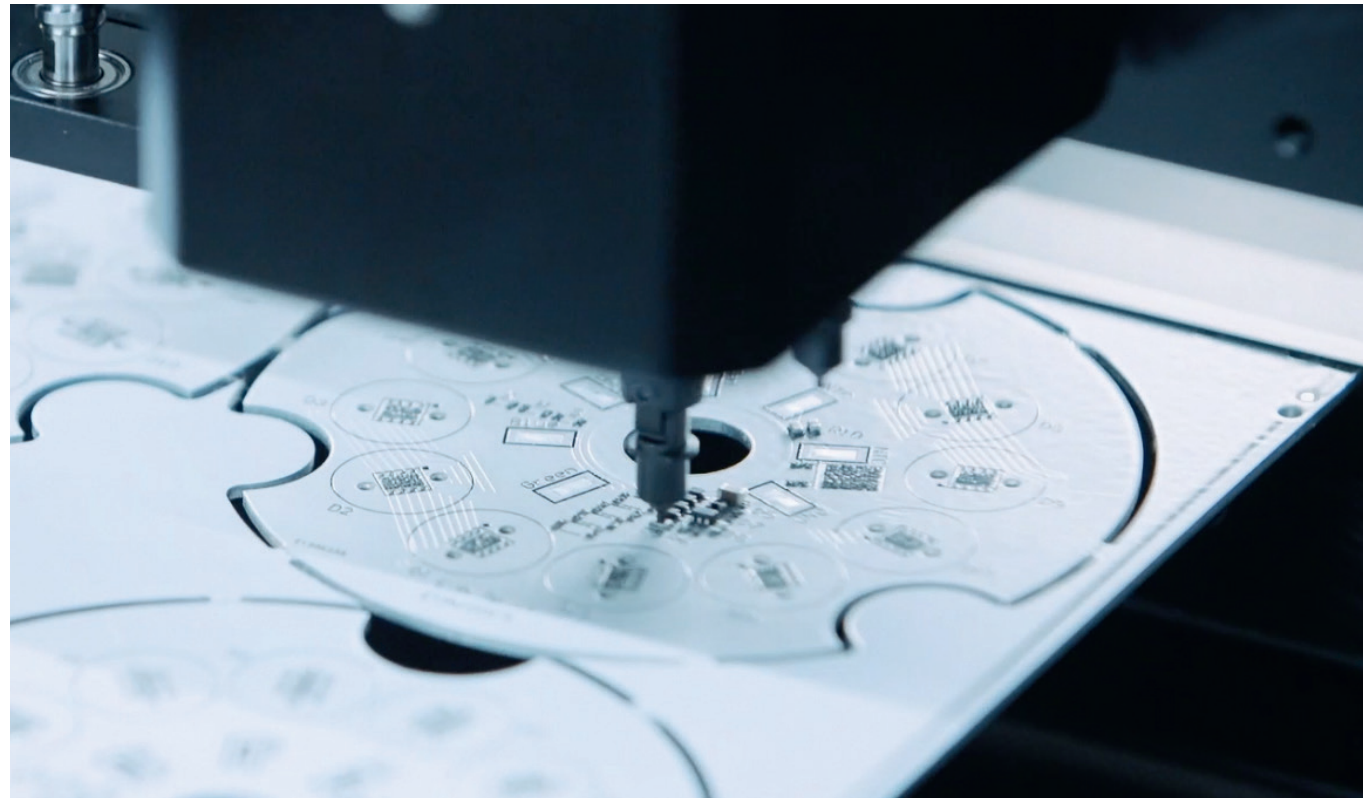

At EVA Optic, all expertise is brought together under one roof. Our team of specialists knows our products inside out and understands how they are applied in the most diverse projects and environments. This enables us to advise and support customers with professional expertise at every stage of a project. In both the commercial and residential pool markets, we know the demanding swimming pool environment like no other. Our support team is widely recognized for its in-depth knowledge and commitment. Our communication lines are short and efficient, and customers know they can always rely on personal and knowledgeable assistance.

Consistent product portfolio

Because we produce entirely in-house, we maintain full control over the quality of our products, down to the component level. We deliver quickly, keep our promises, and ensure continuity. For example, our best-known underwater light model has remained unchanged in dimensions and accessories for more than fifteen years. Even products that are phased out can be serviced without issue for many years, as we are not dependent on external production sites abroad.

Engineering for both user and installer

EVA products are at the forefront of the market. Our philosophy of continuous development allows us to rapidly reach a high level of functionality and reliability, without compromising on design. Our engineers, true technicians at heart, understand the importance of smooth and dependable installation. That's why from the very first design sketch we integrate smart installation solutions, such as the plug-and-play connections of the EVAstream, that ensure fast and error-free installation.

Our product portfolio

The EVA Optic portfolio consists of strong product lines that excel individually, yet together form a complete concept that is unique in the market.

EVAstream

Built-in swimming machines. Thanks to patented innovations, EVAstream provides the most natural and quiet swimming experience. Whether for athletic training or pure relaxation.

EVAstream Move

Mobile counter-current swimming machine. The world's first powerful, fully wireless, battery-powered turbine.

EVAsubaqua

Led underwater lighting. For more than a decade, the highest-performing underwater lighting on the market.

EVAline

Led linear lighting. Specially developed for demanding professional pool environments: impact-resistant, chlorine-resistant, and glare-free, with sufficient light output to illuminate competition pools up to Olympic level with perfect uniformity.

All EVA products can be easily controlled via the standard EVA Web app or with our EVA ArchiTech watertight and wireless control panel.

EVAstream

Patented counter-current technology

The EVAstream transforms any pool into a versatile space for sport, relaxation, and well-being. Its patented turbine design generates a powerful, efficient current while creating an exceptionally spacious swim zone.

Because the swimmer is positioned farther away from the machine, it is possible to accelerate or decelerate naturally. Creating the most realistic swimming experience at home.

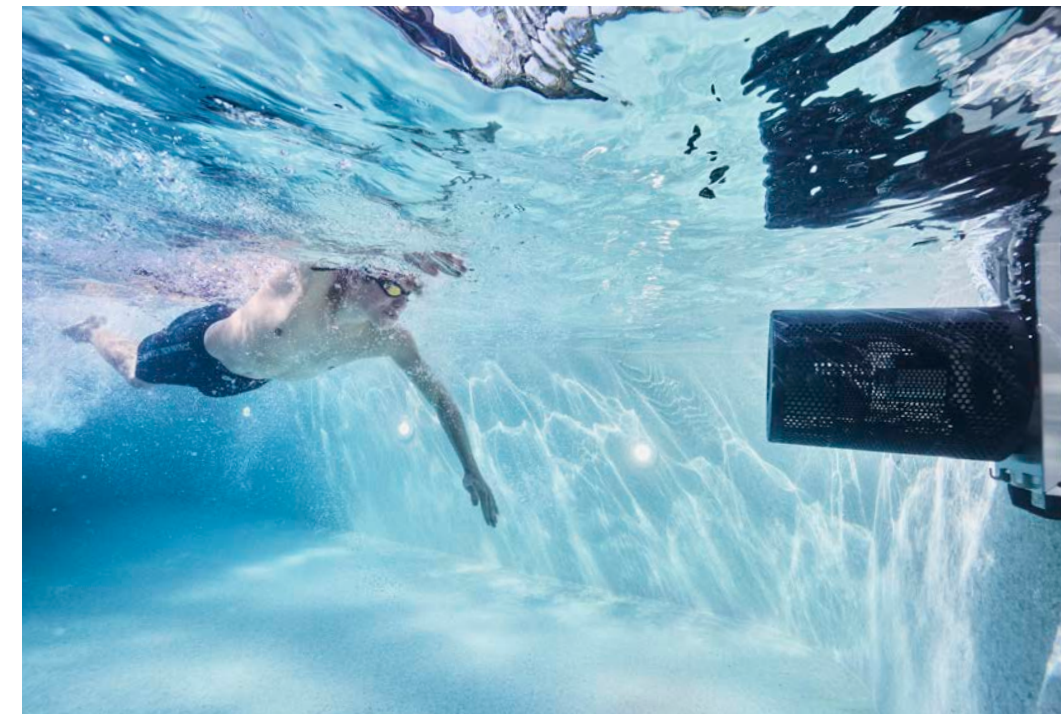

Thanks to its hermetically sealed motor, the EVAstream is the quietest swimming machine on the market, with unmatched energy efficiency and lifespan. With models ranging from 175 to 550 m³/h, covering everything from recreational use to elite sports, there is an EVAstream designed for every swimmer's needs.

EVAstream Move

The world's first wireless swimming machine

The EVAstream Move is the world's first powerful, fully wireless counter-current swimming machine powered by battery. Without cables or construction work, it transforms any existing pool into a fully functional swim facility in just minutes.

Long-time pool owners who previously had no access to counter-current technology can now rediscover their pool. For professionals, the EVAstream Move creates a unique commercial opportunity to generate new revenue from existing pool owners.

EVAsubaqua

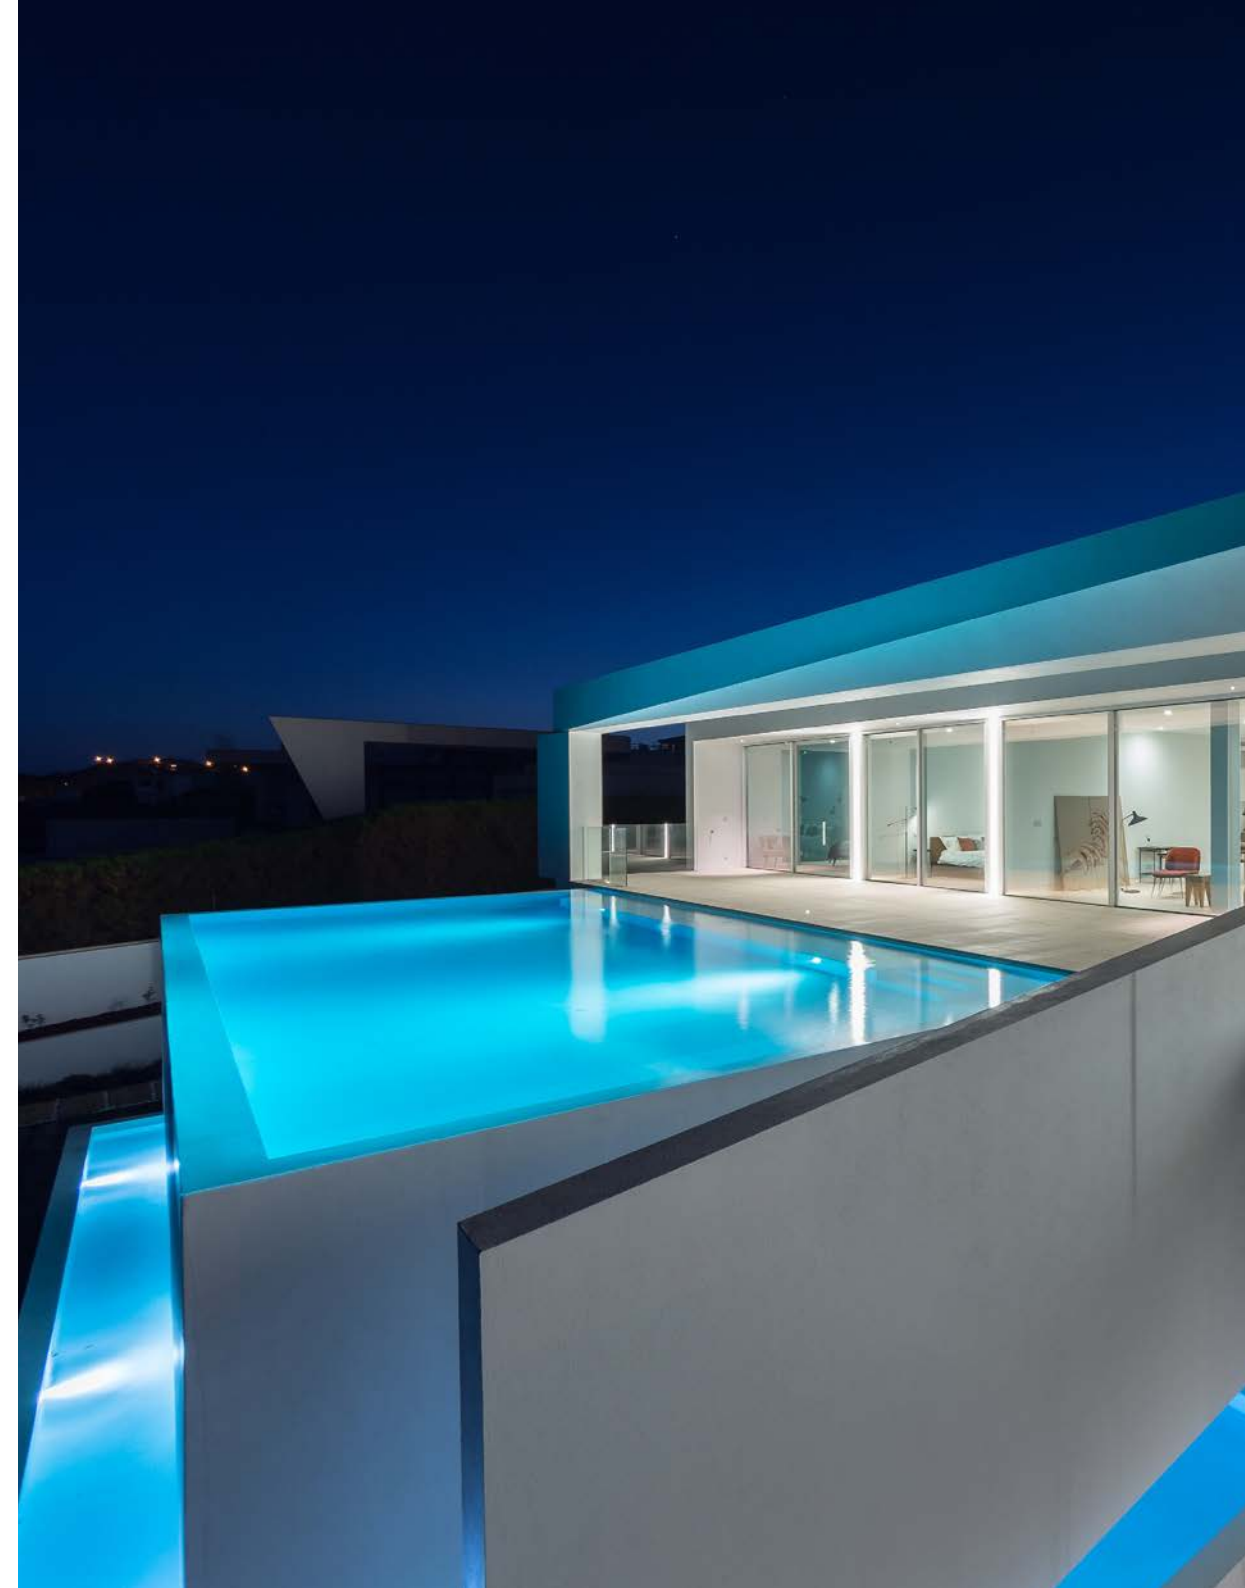

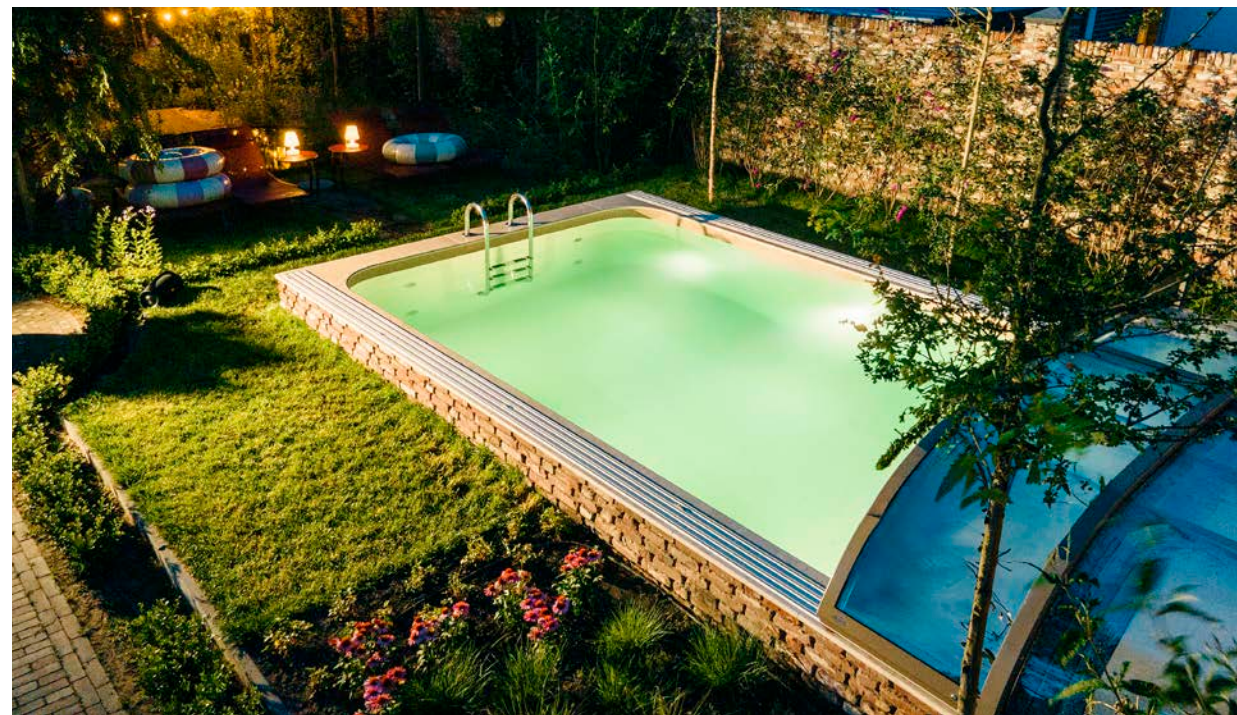

Europe's market leader in underwater lighting

EVAsubaqua led underwater lights are engineered by our specialists to withstand the most demanding conditions and are used worldwide in residential pools, commercial pools, subtropical waterparks, sea aquariums, dive tanks, and even nuclear reactors.

With DEKRA certification according to the international IEC-EN60598-2-18 standard, they meet the strictest requirements for waterproofing, impact resistance, and electrical safety, and are pressure-resistant up to 15 bar.

EVAsubaqua lights are designed for maximum reliability and ease of installation. Thanks to separated electronics and the optionally available pre-assembled multi power supply-boxes, installation is fast and error-free, while the robust design ensures a long lifespan with minimal maintenance. EVAsubaqua lights come with a standard 4-year factory warranty.

Custom branding is possible: underwater lights can be supplied with your own logo. Contact us about the conditions.

A modular system to maximize sales opportunities

Our product range is designed as a modular system, offering unique commercial opportunities in both the broad mid-range and the high-end luxury segment of the market. A high-quality EVAstream entry-level model opens the door to new customers, after which the pool experience can be expanded step by step with additional features and add-ons.

For partners, this approach ensures maximum flexibility and unlocks valuable upsell and cross-sell potential. End users can be inspired with an attractive entry-level package, which can then be expanded with additional features and design options depending on their wishes. This way, a tailored solution is always created, adding value at every stage.

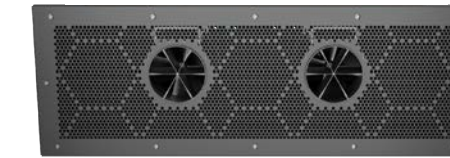

EVA Optic for end users

For end users, this means more versatile use of the pool, with options such as pre-set training sessions linked to dynamic color changing underwater lighting and the new EVA ArchiTech Elite control panel. This fully waterproof, wireless and impact resistant unit allows users to intuitively control the entire swimming experience from poolside or directly from within the water. For design conscious customers, Signature Edition covers in premium finishes allow the pool to be personalized to their preference.

Our promises, proven

Our promises are backed by facts. For more than fifteen years, EVA Optic has been Europe's market leader in led pool lighting, completing over 16,000 residential projects and more than 900 commercial installations across the globe. As a pioneer in counter-current technology, we hold international patents for both the turbine design and the ultra-quiet motor design of the EVAstream.

Our EVAsubaqua lighting is DEKRA-certified according to international safety and quality standards, giving end users the assurance of solutions that are robust, durable, and proven safe. In addition, the design of our products has been honored with prestigious awards, including the Red Dot Design Award for the EVAstream Move.

Building lasting value together

For many years, EVA Optic has been the leading high-end brand for technical experience-enhancing products in swimming pools. Our true strength lies not only in innovation, but in the consistent high quality that enhances every swimming experience.

Alongside competitive pricing and attractive margins, we equip our partners with everything required to engage customers, execute projects efficiently, and gain a distinct position in the market. This includes professional photo and video materials, brochures, presentations, demo models, and a comprehensive website. We also share our expertise and advice: offering training for sales and installation teams, either online or on-site, and providing installation videos, animations, and manuals in multiple languages. In addition, our knowledgeable and experienced team is available for support in Dutch, English, and German.

We consciously build valuable partnerships with companies that, like us, consider sustainable quality and a commitment to innovation as the foundation for success in the premium pool market. Partners who lead in their markets, who uphold the same high standards, and know their local markets inside out. Together we create projects that combine technical excellence with aesthetic and commercial distinction.

Creating new opportunities together

During a personal introduction, we will demonstrate our products and take the time to learn more about your portfolio, customers, and the projects you deliver. Together, we identify how our solutions can make an impact and open up new business opportunities. An exploration that can form the basis for a valuable partnership.
